

# Evolutionary paleoecology and the biology of extinction

Peter D Smits

Committee on Evolutionary Biology, University of Chicago

January 19, 2014

Theory

Brachiopod survival

Mammal survival

Mammal community connectedness

## Theory

Brachiopod survival

Mammal survival

Mammal community connectedness

# Framework

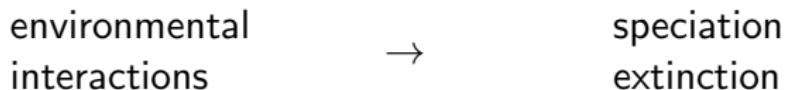

## Questions

- ▶ Why do certain taxa go extinct while others do not?
- ▶ How is emergence “formed?” When should it be invoked?
- ▶ Is extinction risk taxon–age independent?
- ▶ When should we expect global, regional, or local processes to dominate?

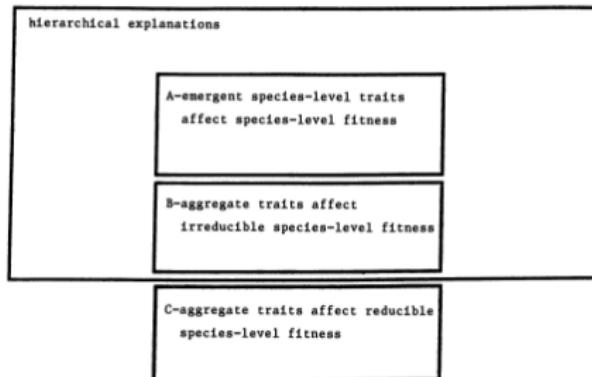

# Evolutionary paleoecology

*... the consequences of distinct ecological factors on differential rate dynamics, particularly rates of faunal turnover and diversification.*

(Kitchell 1985 *Paleobiology*)

# Emergent properties

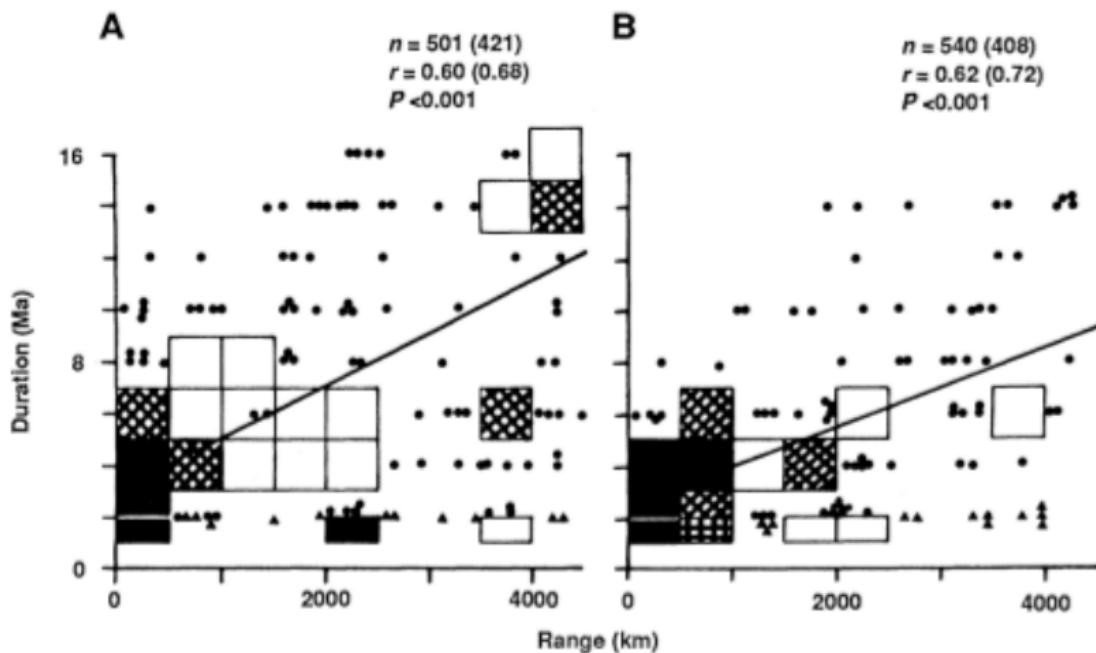

(Grantham 1995 *Ann. Rev. Ecol. Syst.*)

## Criteria

Cannot be reduced to lower level (e.g. organismal)

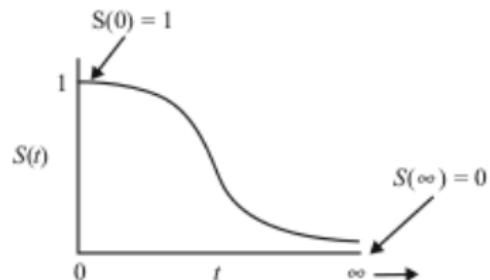

# Range size

(Jablonski 1987 *Science*)

# Probability of survival

Theoretical  $S(t)$ :

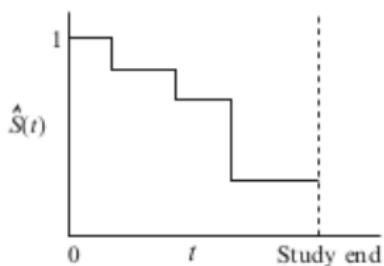

## Survival function

$$S(t) = P(T > t)$$

- ▶  $T$ : survival time ( $\geq 0$ )
- ▶  $t$ : specified time

$\hat{S}(t)$  in practice:

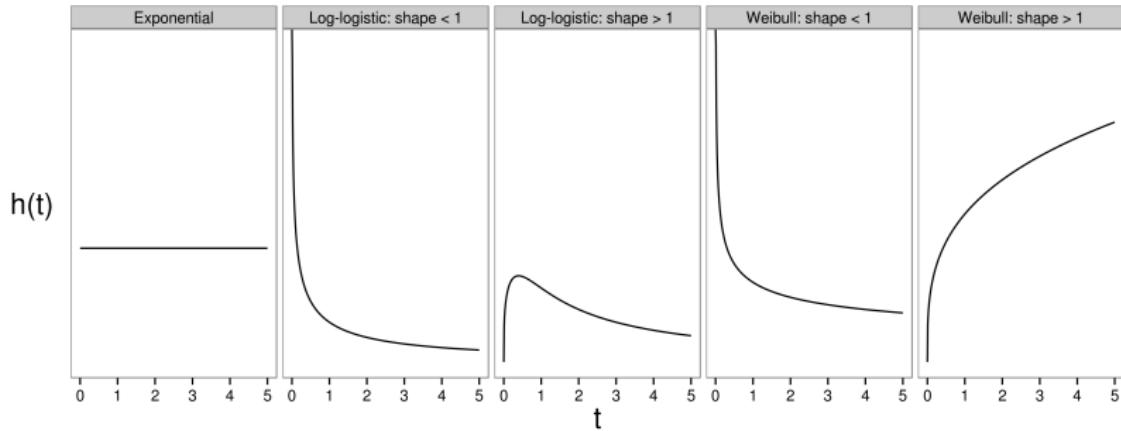

(Kleinbaum and Klein 2012)

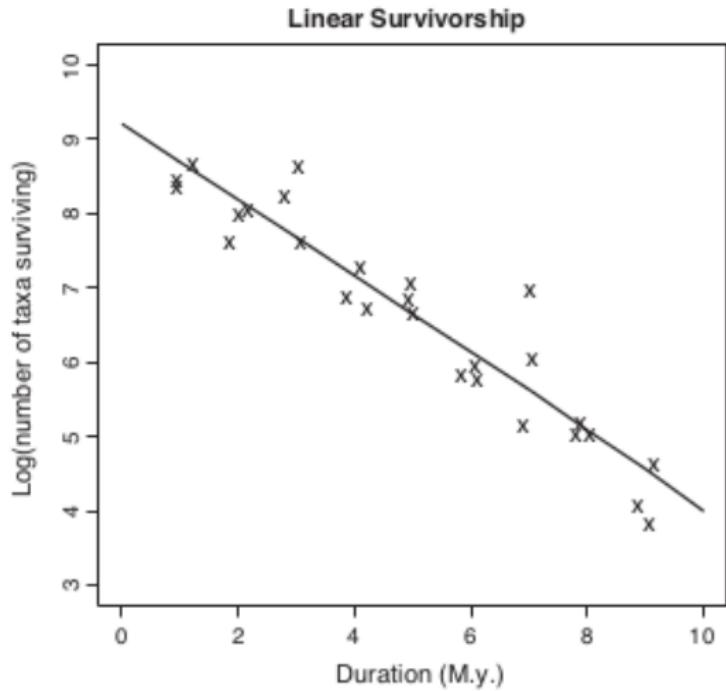

# Instantaneous potential of failure (extinction)

Hazard function  $\equiv$  conditional failure rate

$$h(t) = \lim_{\Delta t \rightarrow 0} \frac{P(t \leq T < t + \Delta t | T \geq t)}{\Delta t}$$

# Van Valen's observation

(Liow et al. 2011 *TREE*)

# Law of Constant Extinction

## Definition

Extinction rate, in a given adaptive zone, is taxon–age independent.

(Van Valen 1973 *Evol. Theory*)

translation: hazard is constant with respect to time  
(exponential survival)

$$h(t) = \lambda \iff S(t) = \exp^{-\lambda t}$$

# Study systems

## brachiopods

- ▶ marine
- ▶ sessile
- ▶ Permian ( $\sim 47$  My)
- ▶ global warming
- ▶ Australasia

## mammals

- ▶ terrestrial
- ▶ motile
- ▶ Cenozoic ( $\sim 65$  My)
- ▶ global cooling
- ▶ North America, Europe, South America

# Proposed studies

## Chapters

- ▶ Permian brachiopod trait based survival
  - ▶ generic level
  - ▶ necessity of emergence?
- ▶ Cenozoic mammal trait based survival
  - ▶ generic, specific level
  - ▶ necessity of emergence?
- ▶ Cenozoic mammal community connectedness
  - ▶ global versus regional versus local
  - ▶ differences across traits?

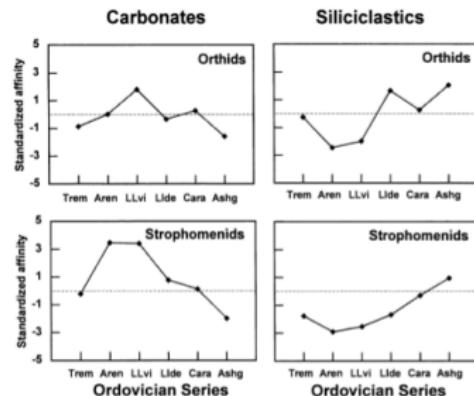

Theory

Brachiopod survival

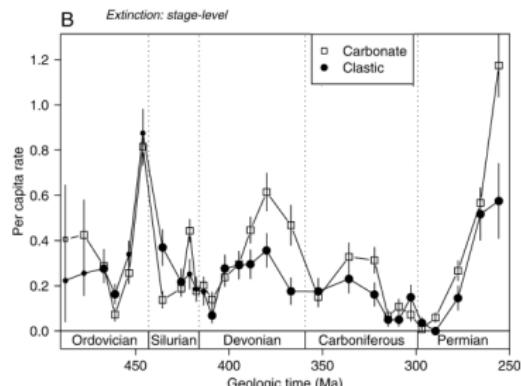

Mammal survival

Mammal community connectedness

# Substrate affinity

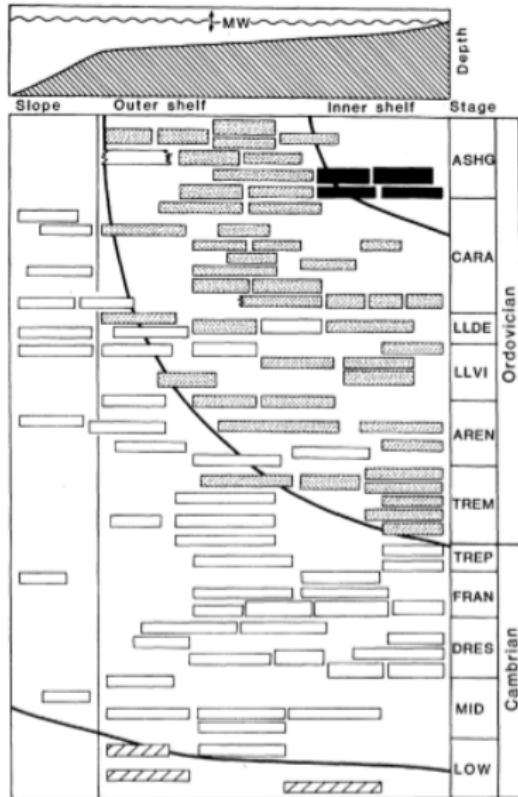

(Miller and Connolly 2001 *Paleobio.*)

(Foote 2006 *Paleobio.*)

- ▶ carbonates, clastics, mixed
  - ▶ physio-chemical
  - ▶ availability
  - ▶ weak proxy for larval dispersal?
- ▶ Phanerozoic decrease carbonates:clastics
  - ▶ predicted longevity: clastics > carbonates

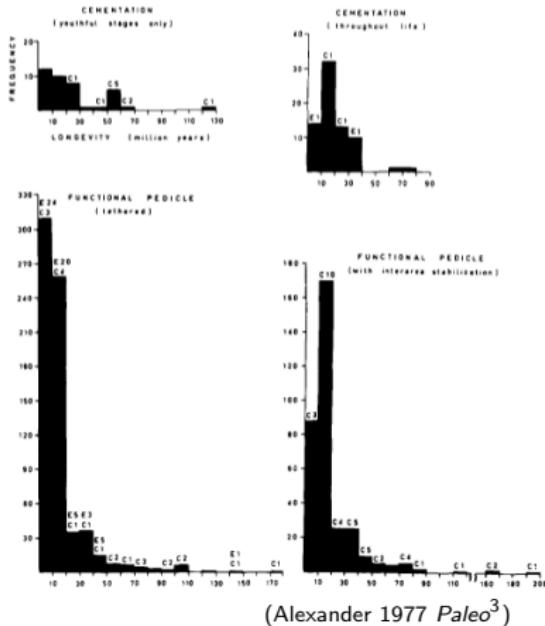

# Habitat preference

(Jablonski *et al.* 1983 *Science*)

- ▶ on-shore, off-shore, none
  - ▶ above/below storm wave base
  - ▶ energetics, availability
- ▶ classically invoked re. diversification of higher taxa
  - ▶ onshore → offshore

# Affixing strategy

- ▶ environmental energetics and material (mud)
- ▶ pedunculate, reclining, cementing
  - ▶ endemics duration: reclining > others
  - ▶ cosmopolitan duration: ped./cement > others
- ▶ pedunculate:on-shore, reclining:off-shore

# Assigning substrate and habitat

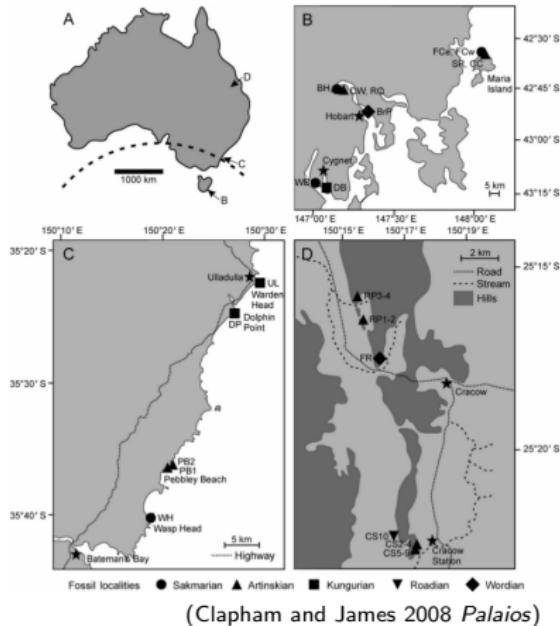

## Probability of assignment

$$P(H_1|E) = \frac{P(E|H_1)P(H_1)}{P(E|H_1)P(H_1) + P(E|H_2)P(H_2)}$$
$$P(E|H) = \binom{n}{k} p^k (1-p)^{n-k}$$

- ▶  $p$ : proportion of all collections (e.g.) carbonate
- ▶  $n$ : total # taxon occurrences
- ▶  $k$ : of  $n$ , # (e.g.) carbonate occurrences

(Simpson and Harnik 2009 *Paleobiology*)

# Analysis

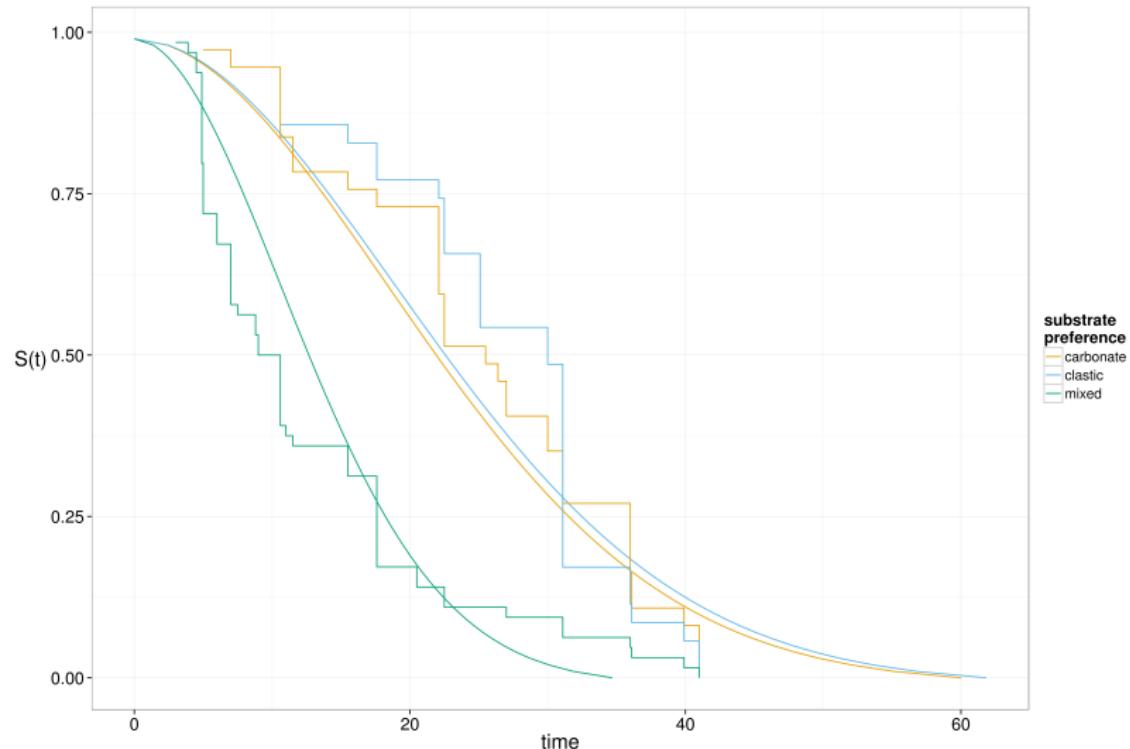

- ▶ genus FAD–LAD
  - ▶ occurring in, ranging into/out of Permian
  - ▶ interval censoring
- ▶ time-independent traits
  - ▶ substrate following Foote 2006 *Paleobio.*
  - ▶ habitat following Kiessling *et al.* 2007 *Paleo*<sup>3</sup>
- ▶ time-dependent climate
- ▶ survival distributions:  $\exp(\lambda)$ ,  $Weibull(\lambda, k)$ , etc.

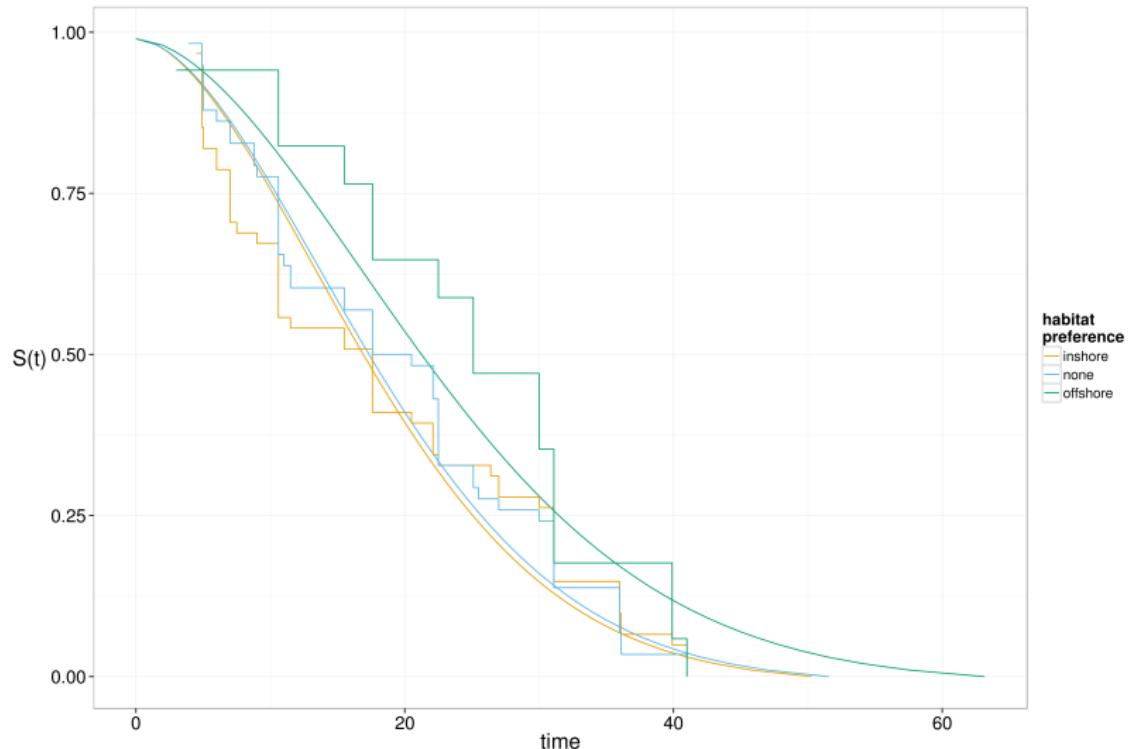

## Preliminary results: model comparison

formula	distribution	shape	df	AICc	weight
~ aff	weibull	1.91	4	1003.4543	0.81
~ aff + hab	weibull	1.92	6	1006.3618	0.19
~ aff * hab	weibull	1.94	10	1013.3003	0.01
~ 1	weibull	1.76	2	1034.4234	0.00
~ hab	weibull	1.76	4	1036.2236	0.00
~ aff	exponential		3	1071.9199	0.00
~ aff + hab	exponential		5	1075.6211	0.00
~ 1	exponential		1	1083.8734	0.00
~ aff * hab	exponential		9	1084.0485	0.00
~ hab	exponential		3	1086.7439	0.00

# Preliminary results: best substrate

# Preliminary results: best habitat

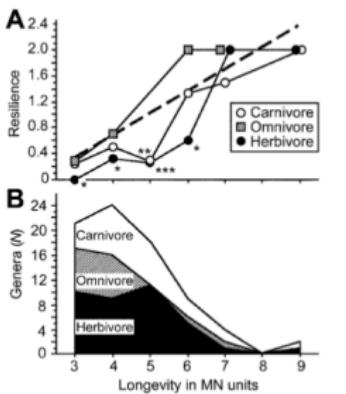

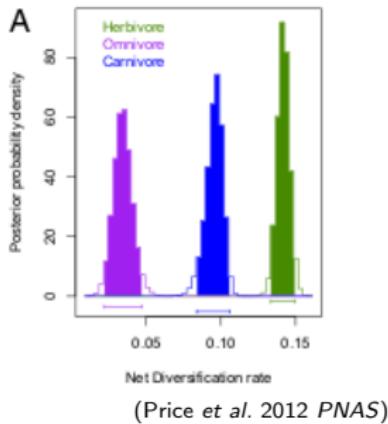

Theory

Brachiopod survival

Mammal survival

Mammal community connectedness

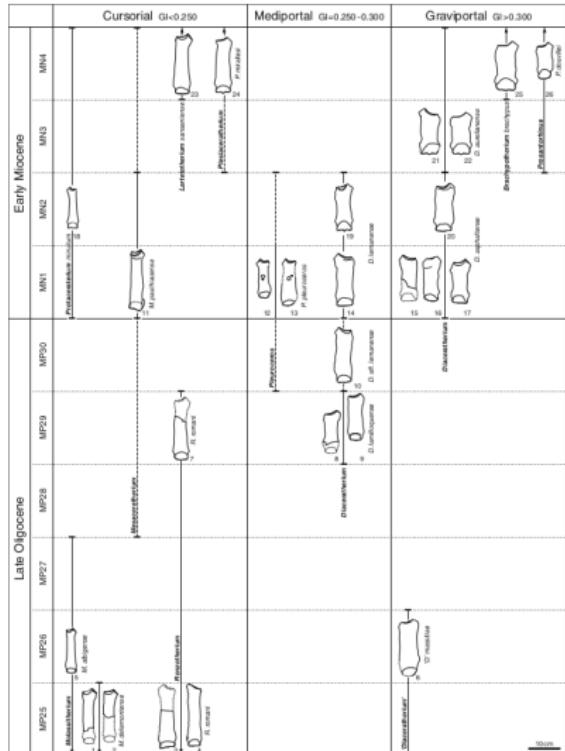

# Dietary category

(Jernvall and Fortelius 2004 Am. Nat.)

- ▶ trophic hierarchy (stability → duration)
  - ▶ herb: most stable, longest duration
  - ▶ carni: least stable, shortest duration
  - ▶ omni: avg. stability, avg. duration
- ▶ ↑ diversification
  - ▶ ↑ origination; ≈ extinction
  - ▶ ≈ origination; ↓ extinction

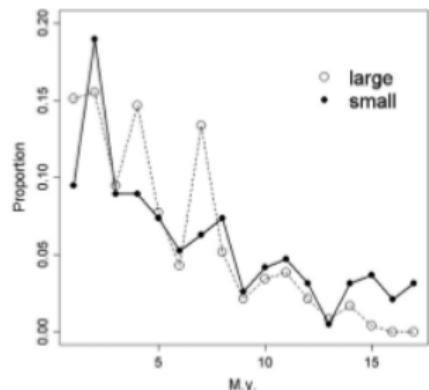

# Locomotor category

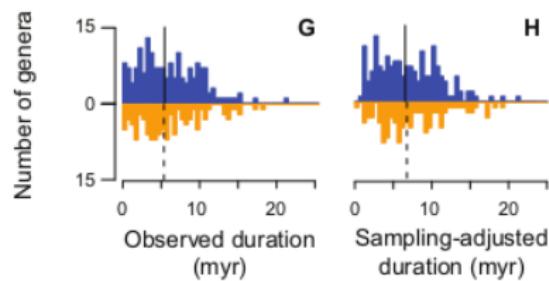

(Scherler et al. 2013 Swiss. J. Geosci.)

- ▶ Paleogene → Neogene
  - ▶ open → closed environment
- ▶ predictions
  - ▶ arboreal:  
Paleogene > Neogene
  - ▶ ground dwelling:  
Paleogene < Neogene
  - ▶ scansorial:  
Paleogene ≈ Neogene

# Body size

(Liow et al. 2008 PNAS)

(Tomiya 2013 Am. Nat.)

- ▶ ↑ body size, ↑ energy req,  
↑ range size, ↓ extinction
- ▶ Europe
  - ▶ lrg body size genera:  
↑ extinction
- ▶ North America
  - ▶ generic body size:  
 $\simeq$  extinction

# Analysis

- ▶ data: genus, species FAD–LAD
  - ▶ NA: PBDB (h/t Alroy)
  - ▶ Europe: PBDB, NOW
  - ▶ SA: collections, compilations
- ▶ traits: time-indep. covariates
- ▶ climate: time-dep. covariate
  - ▶ continuous  $\delta O^{18}$  isotope (Zachos *et al.* 2008 *Nature*)
- ▶ Paleogene versus Neogene
- ▶ survival distributions:  $\exp(\lambda)$ ,  $Weibull(\lambda, k)$ , etc.

Theory

Brachiopod survival

Mammal survival

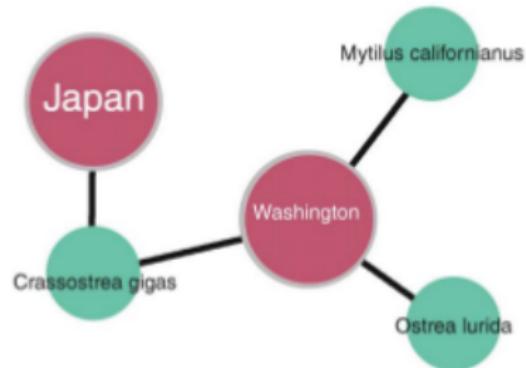

Mammal community connectedness

# Community connectedness

## Definition

The degree to which localities are composed of endemic versus cosmopolitan taxa, and how similar this ratio is across localities.

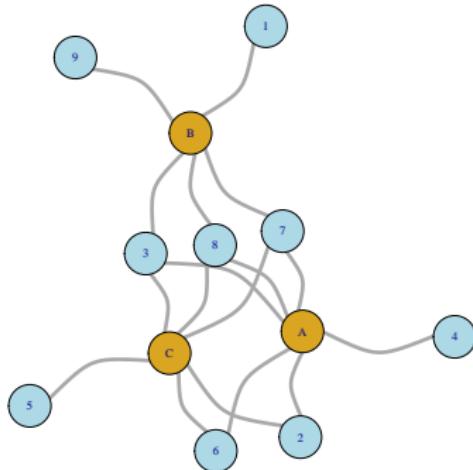

# Biogeographic networks

(Vilhena *et al.* 2013 *Sci. Reports*)

- ▶ taxa: species
- ▶ locality: 2x2 equal-area map projection grid
- ▶ 2 My intervals
- ▶ PBDB, NOW, museum collections, compilations

# Average relative number of endemics

$$u = \{1, 2, 1\}$$

$$n = \{6, 5, 6\}$$

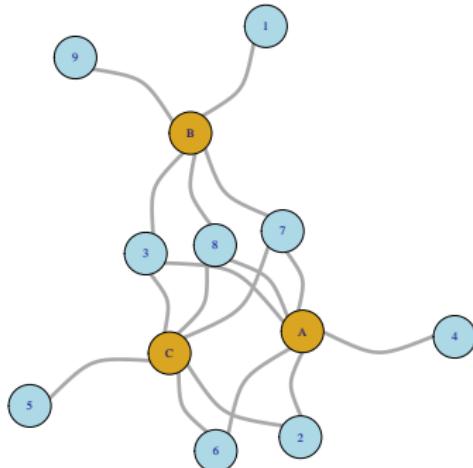

$$L = 3$$

$$E \approx 0.24$$

$$E = \frac{\sum_{i=1}^L \frac{u_i}{n_i}}{L}$$

- ▶  $L$ : number of localities
- ▶  $u$ : number of taxa unique to a locality
- ▶  $n$ : number of taxa at a locality
- ▶  $0 \leq E \leq 1$

## Average relative occupancy per taxon

$$I = \{1, 2, 3, 1, 1, 2, 3, 3, 1\}$$

$$L = 3$$

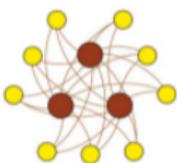

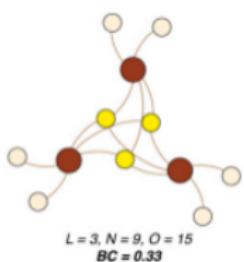

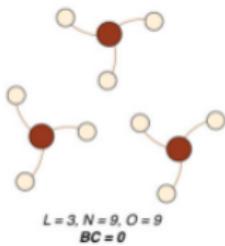

$$N = 9$$

$$Occ \approx 0.63$$

$$Occ = \frac{\sum_{i=1}^N \frac{l_i}{L}}{N}$$

- ▶  $N$ : total number of taxa
- ▶  $l_i$ : number of localities a taxon occurs at
- ▶  $L$ : number of localities
- ▶  $0 \leq Occ \leq 1$

# Biogeographic connectedness

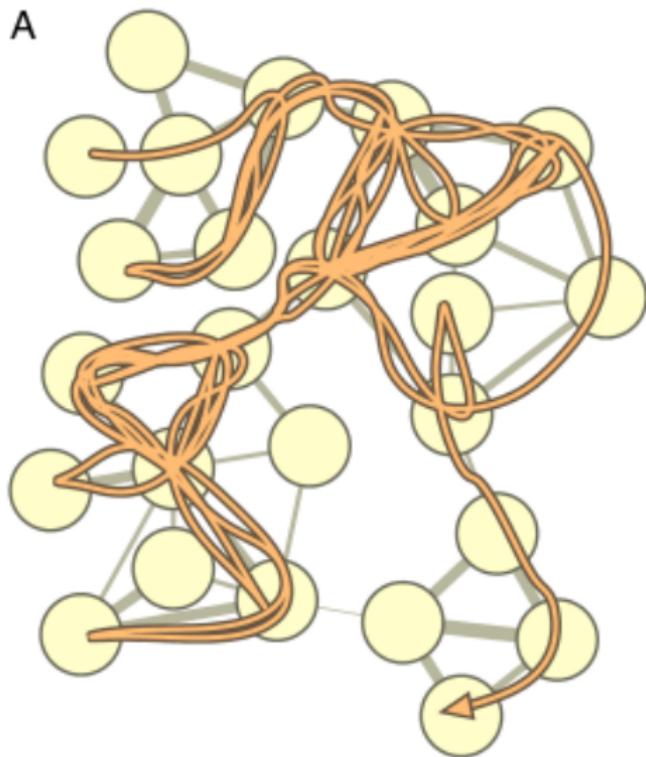

$$BC = \frac{O - N}{LN - N}$$

- ▶  $O$ : number of occurrences
- ▶  $N$ : total number of taxa
- ▶  $L$ : number of localities
- ▶  $0 \leq BC \leq 1$

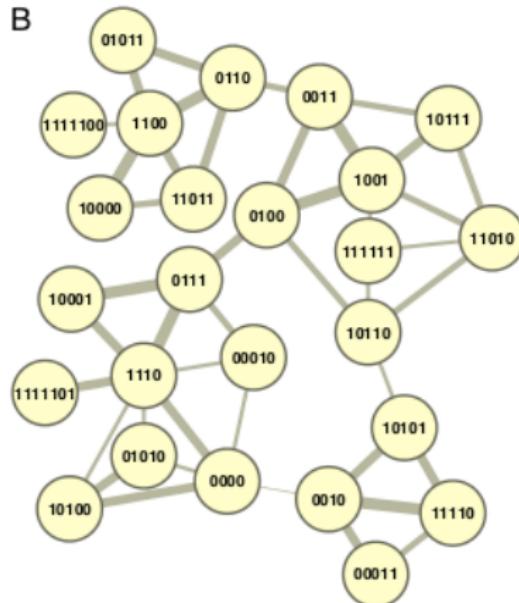

(Sidor et al. 2013 PNAS)

# Code length

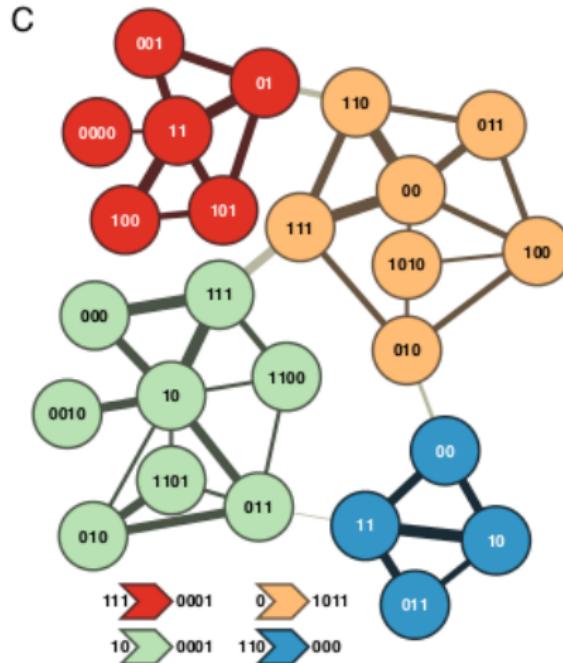

(Rosvall and Bergstrom 2008 *PNAS*)

# Code length

(Rosvall and Bergstrom 2008 PNAS)

# Compressing a network

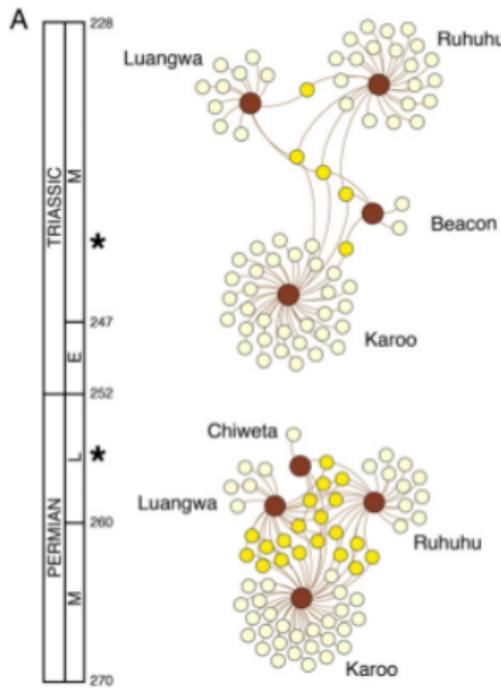

Map equation

(Rosvall and Bergstrom 2008 PNAS)

$$L(\mathbf{M}) = q_{\curvearrowright} H(\mathcal{Q}) + \sum_{i=1}^m p_{\circlearrowleft}^i H(\mathcal{P}^i)$$

- ▶  $\mathbf{M}$ : module partition of  $n$  nodes in  $m$  partitions
- ▶  $L(\mathbf{M})$ : code length of network
- ▶  $q_{\curvearrowright}$ : P(random walk switches modules)
- ▶  $H(\mathcal{Q})$ : entropy module codewords
- ▶  $H(\mathcal{P}^i)$ : entropy within-module
- ▶  $p_{\circlearrowleft}^i$ : rate of within-module use

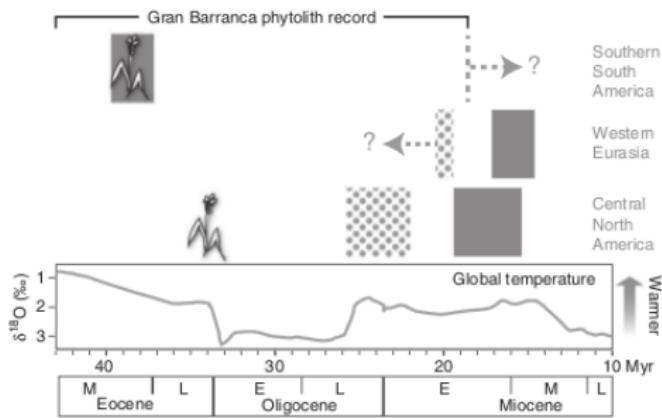

# Global versus regional versus local scale

- ▶ global
  - ▶ corr w/ global climate
  - ▶ multiple regions corr
- ▶ regional
  - ▶  $\downarrow E, \uparrow Occ,$   
 $\uparrow BC, \uparrow code$
- ▶ local
  - ▶  $\uparrow E, \downarrow Occ,$   
 $\downarrow BC, \downarrow code$
- ▶ not mutually exclusive

(Sidor et al. 2013 PNAS)

# Global expectations: locomotor category

(Strömberg et al. 2013 *Nature Com.*)

## ► arboreal

- ▶  $\uparrow E$ ,  $\uparrow$  code
- ▶  $\downarrow BC$ ,  $\downarrow$  Occ

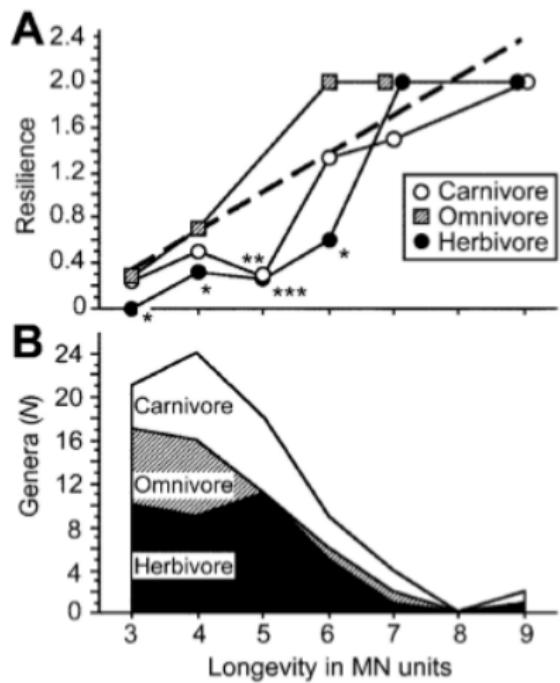

## ► ground dwelling

- ▶  $\downarrow E$ ,  $\downarrow$  code
- ▶  $\uparrow BC$ ,  $\uparrow$  Occ

## ► scansorial

- ▶ constant  $\vee$  random

# Global expectations: dietary category

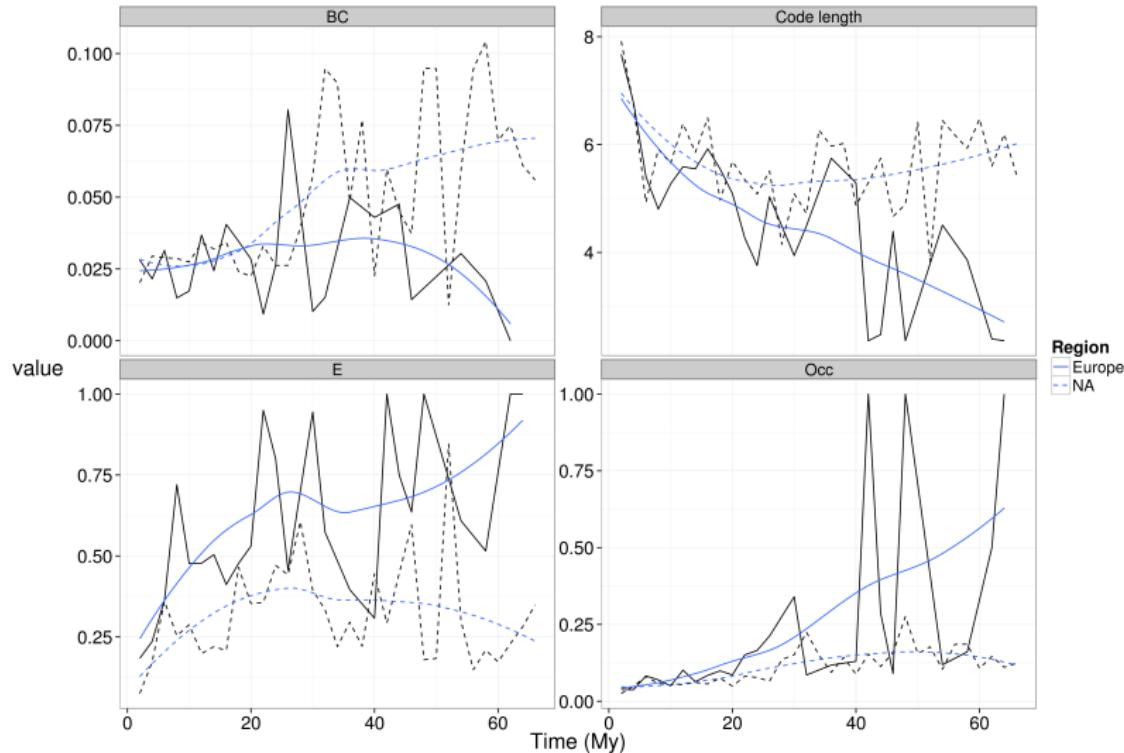

- ▶ herbivore
  - ▶ most like all taxa
- ▶ carnivore
  - ▶ constant √ corr w/ herbivores
- ▶ omnivore
  - ▶ constant √ random

(Jernvall and Fortelius 2004 *Am. Nat.*)

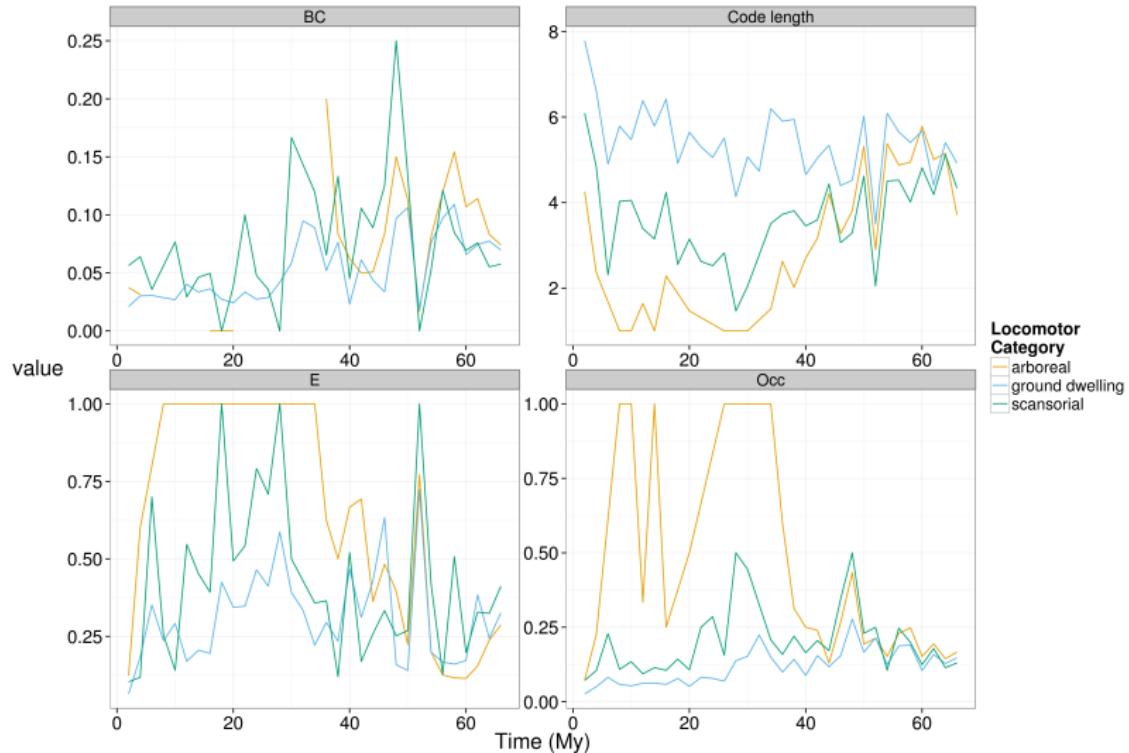

# Regional variation

- ▶ North America
  - ▶ similar to global predictions
  - ▶ major lit. questions re. effects climate change
- ▶ Europe
  - ▶ stable trophic diversity
  - ▶ abundant herbivores drive patterns
- ▶ South America
  - ▶ high provincialism
  - ▶ early expansion of ground dwelling taxa

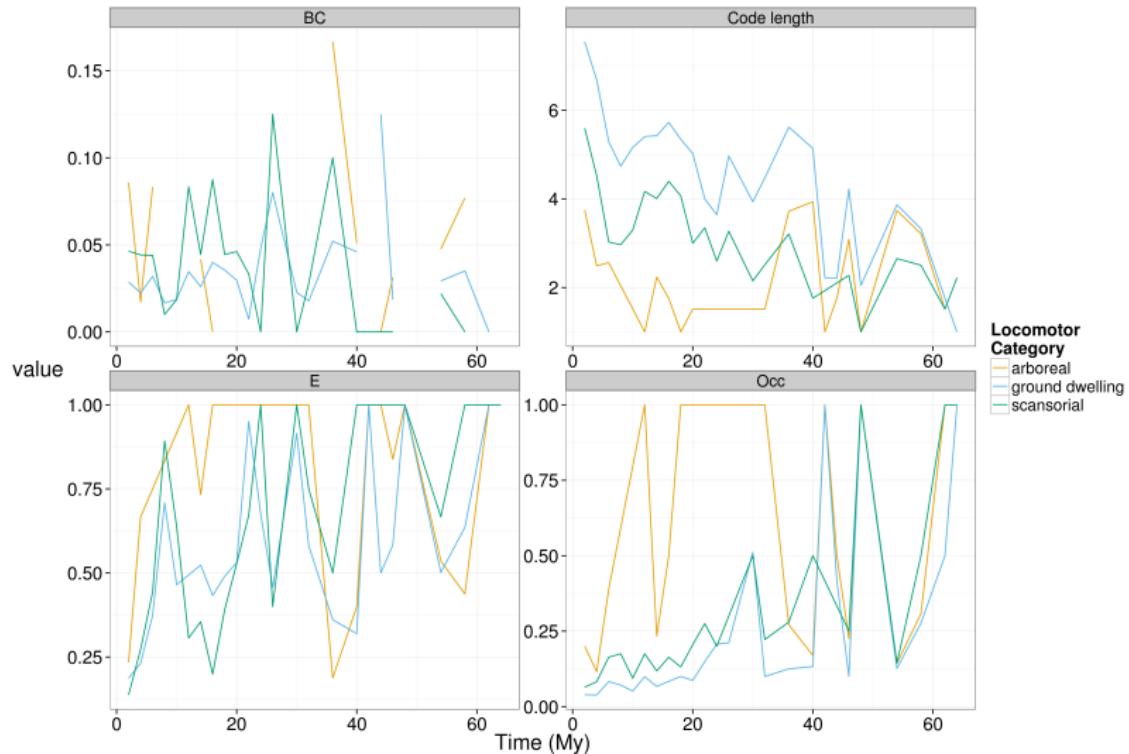

# Preliminary results: NA, Eur

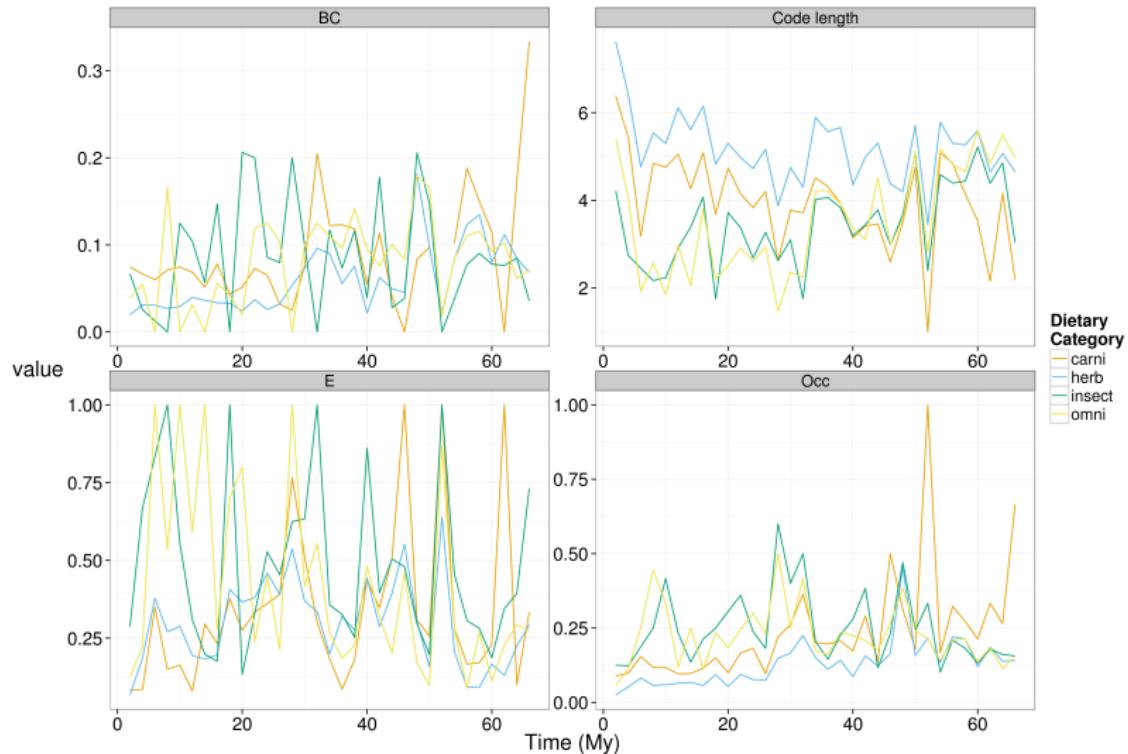

# Preliminary results: locomotor category NA

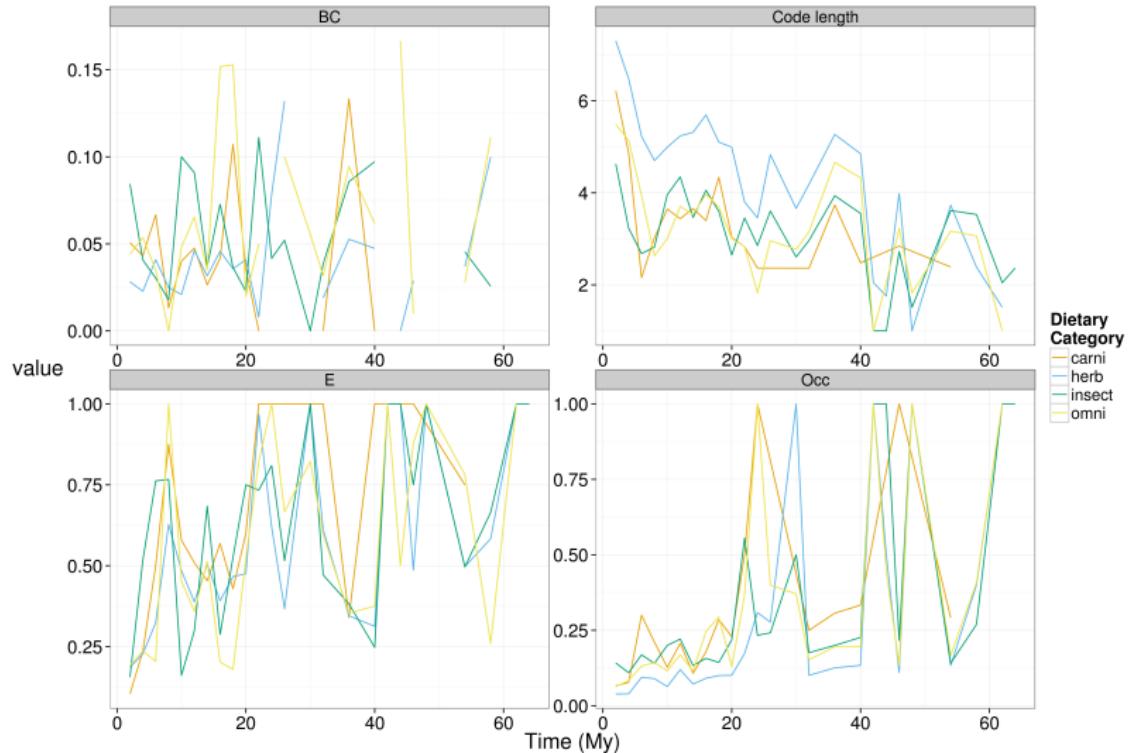

# preliminary results: locomotor category Eur

# Preliminary results: dietary category NA

# Preliminary results: dietary category Eur

# Questions

## Questions

- ▶ Why do certain taxa go extinct while others do not?
- ▶ How is emergence “formed?” When should it be invoked?
- ▶ Is extinction rate taxon–age independent?
- ▶ When should we expect global, regional, or local processes to dominate?

# Summary of proposed research

## Studies

- ▶ Permian brachiopod trait based survival
- ▶ Cenozoic mammal trait based survival
- ▶ Cenozoic mammal community connectedness

# Acknowledgements

## ► Committee

## ► Discussion

- ▶ David Bapst, Megan Boatright, Ben Frable, Colin Kyle, Darcy Ross, Liz Sander
- ▶ John Alroy, Graeme Lloyd, Carl Simpson, Graham Slater

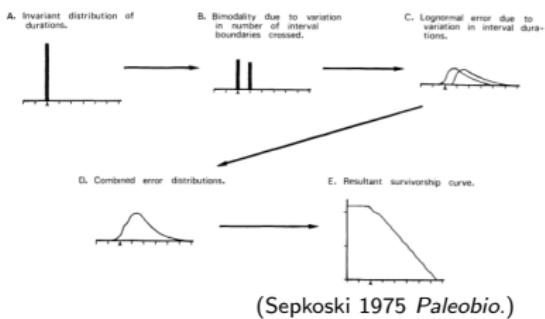

## Further concerns

# Theseus' ship: biases to analyzing survival

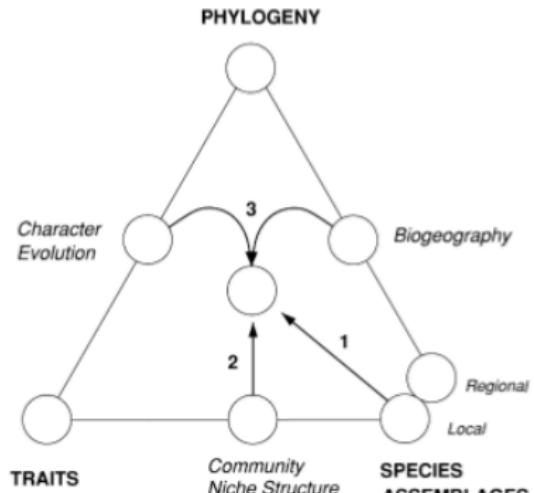

(Raup 1975 *Paleobio.*)

- ▶ bias away from  $h(t) = \lambda$ ?
  - ▶ censoring
  - ▶ sampling/stratigraphy
  - ▶ species vs genus
  - ▶ anagenesis/cryptic speciation
- ▶ use time-homogeneous birth-death model
  - ▶ constant  $p, b$
  - ▶ expected  $S(t) = \exp^{-\lambda t}$
  - ▶ vary anagenesis/sampling

# Phylogenetic similarity of communities

(Webb *et al.* 2002 *Ann. Rev. Ecol. Syst.*)

- ▶ informal phylogeny (taxonomy tree)
  - ▶ PBDB, EoL, etc.
  - ▶ unit branch length
- ▶ measures
  - ▶ mean pairwise–locality patristic distance
  - ▶ mean locality phylogenetic species variability (Helmus *et al.* 2007 *Am. Nat*)
