

Evolutionary paleoecology and the biology of extinction

Peter D Smits

Committee on Evolutionary Biology, University of Chicago

January 8, 2014

Introduction and theory

Brachiopods, environmental preference, and extinction

Ecology and survival in Cenozoic mammals

Community connectedness in Cenozoic mammals

Introduction and theory

Brachiopods, environmental preference, and extinction

Ecology and survival in Cenozoic mammals

Community connectedness in Cenozoic mammals

Framework

Questions

- ▶ Why do certain taxa go extinct while others do not?
- ▶ How is emergence “formed?” When should it be invoked?
- ▶ Is extinction risk taxon–age independent?
- ▶ When should we expect global, regional, or local processes to dominate?

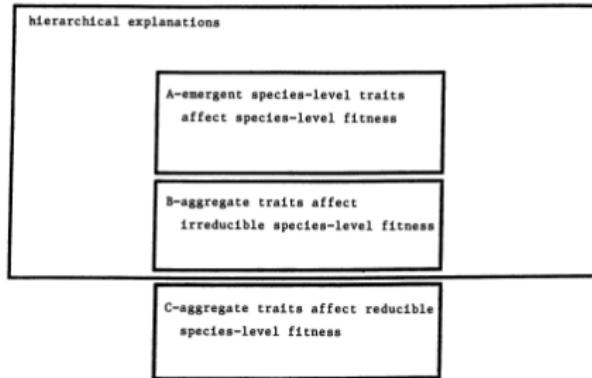

Evolutionary paleoecology

... the consequences of distinct ecological factors on differential rate dynamics, particularly rates of faunal turnover and diversification.

(Kitchell 1985 Paleobiology)

environmental interactions → macroevolution

Emergent properties

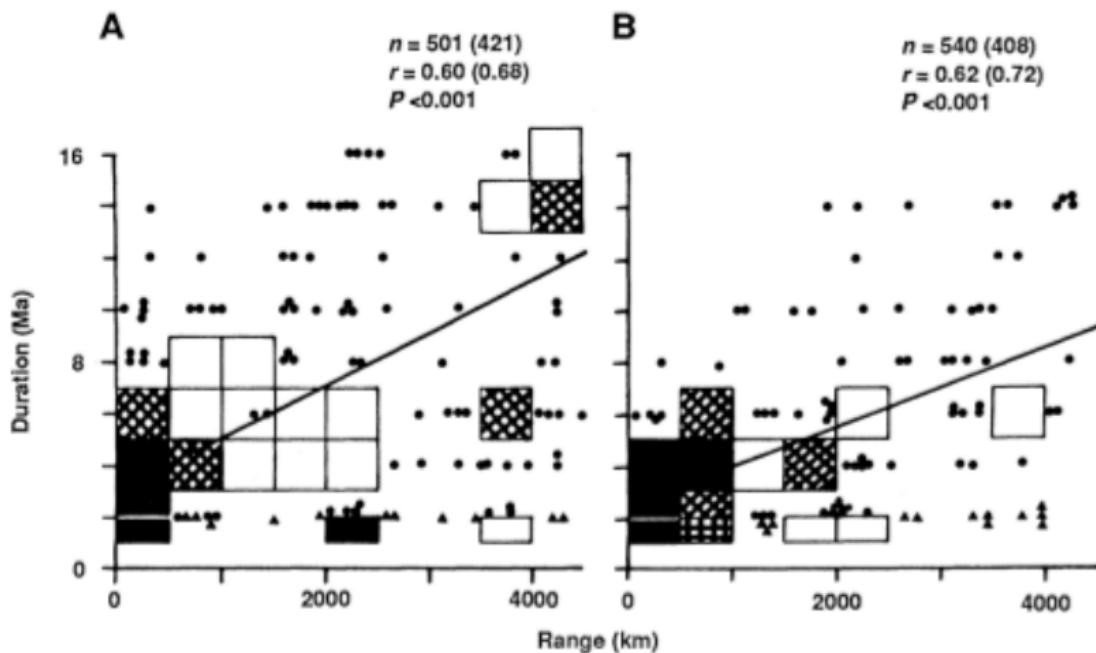

(Grantham 1995 *Ann. Rev. Ecol. Syst.*)

Species level

Trait that cannot be reduced to organismal level

Product of one or more traits/factors

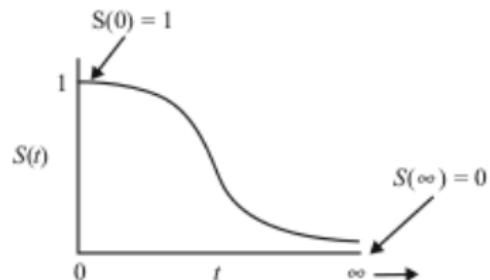

Range size

(Jablonski 1987 *Science*)

Probability of survival

Theoretical $S(t)$:

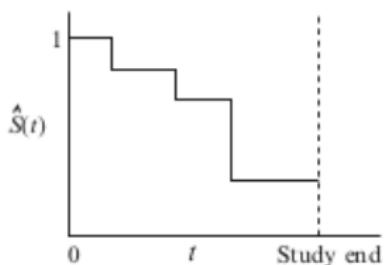

Survival function

$$S(t) = P(T > t)$$

- ▶ T : survival time (≥ 0)
- ▶ t : specified time

$\hat{S}(t)$ in practice:

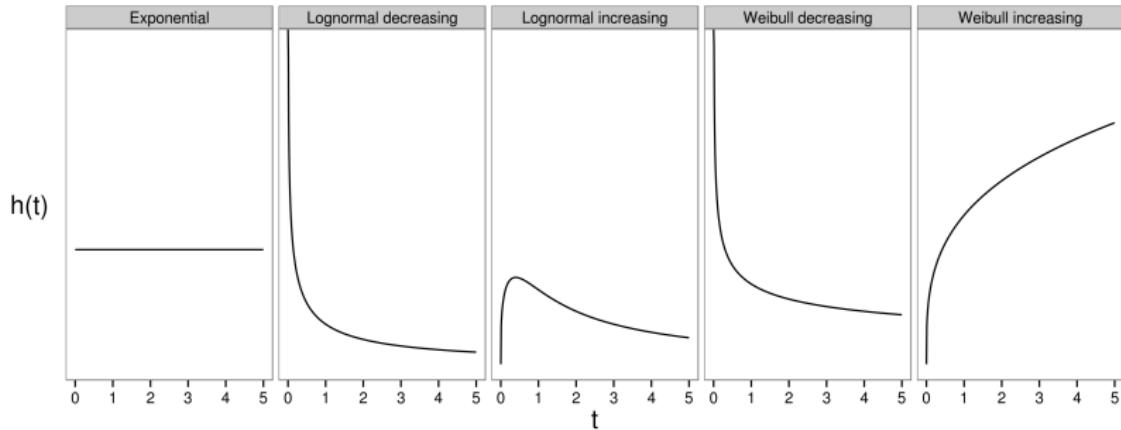

(Kleinbaum and Klein 2012)

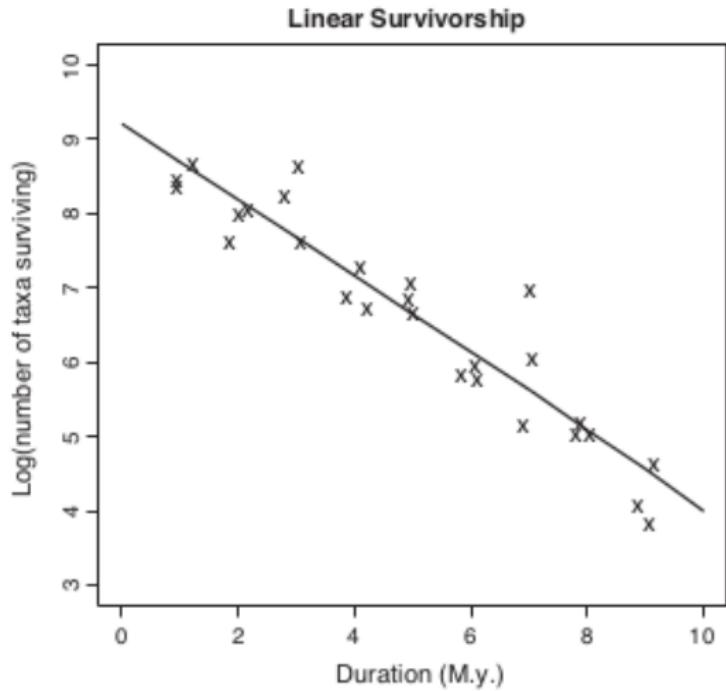

Instantaneous potential of failure (extinction)

Hazard function \equiv conditional failure rate

$$h(t) = \lim_{\Delta t \rightarrow 0} \frac{P(t \leq T < t + \Delta t | T \geq t)}{\Delta t}$$

Van Valen's observation of survival

(Liow et al. 2011 *TREE*)

Law of Constant Extinction

Definition

Extinction risk in a given adaptive zone is taxon–age independent.

(Van Valen 1973 *Evol. Theory*)

translation: hazard is constant with respect to time
(exponential survival)

$$h(t) = \lambda \iff S(t) = \exp^{-\lambda t}$$

Brachiopods and mammals: a comparison

brachiopods

- ▶ marine
- ▶ sessile
- ▶ Permian (~ 47 My)
- ▶ Australasia
- ▶ global warming

mammals

- ▶ terrestrial
- ▶ motile
- ▶ Cenozoic (~ 65 My)
- ▶ North America, Europe, South America
- ▶ global cooling

Series of related questions

- ▶ generic level survival in brachiopods
 - ▶ ecological traits re. environmental pref. (emergence)
 - ▶ survival distribution
- ▶ specific level survival in mammals
 - ▶ ecological traits re. range size (emergence)
 - ▶ generic versus specific survival
 - ▶ anagenesis/species:genus simulation
 - ▶ survival distribution
- ▶ community connectedness in mammals
 - ▶ global versus regional versus local scale processes
 - ▶ ecological traits (trophic/locomotion)

Introduction and theory

Brachiopods, environmental preference, and extinction

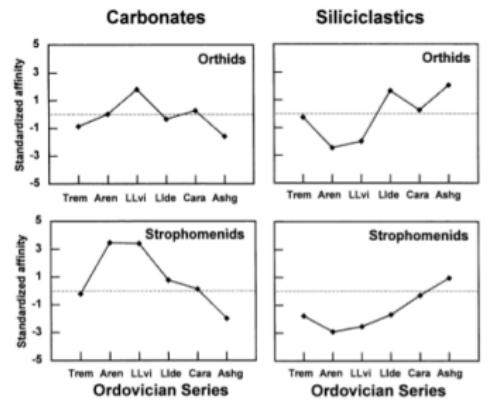

Ecology and survival in Cenozoic mammals

Community connectedness in Cenozoic mammals

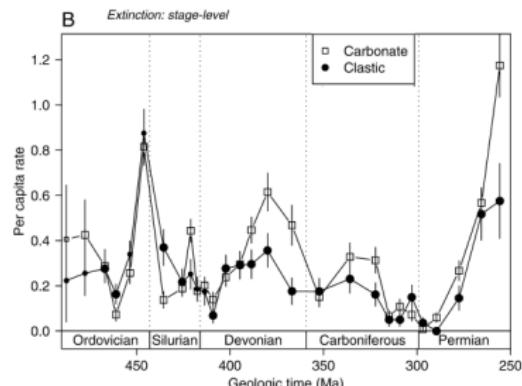

Traits relating to environment and range size

- ▶ substrate affinity
 - ▶ physical, chemical
 - ▶ availability
- ▶ habitat preference
 - ▶ energetics
 - ▶ availability
- ▶ affixing strategy
 - ▶ energetics
 - ▶ optimality

Substrate affinity

(Miller and Connolly 2001 *Paleobio.*)

(Foote 2006 *Paleobio.*)

- ▶ carbonates, clastics, mixed
- ▶ lithology/deposition environment
- ▶ Phanerozoic decrease in carbonates:clastics

Habitat preference

- ▶ on-shore, off-shore, none
- ▶ sea-level and energetics
- ▶ Pharenozoic decrease in
on-shore:off-shore

Affixing strategy

- ▶ pedunculate, reclining, cementing
- ▶ pedunculate:on-shore, reclining:off-shore
- ▶ environmental energetics

Assigning substrate and habitat

Probability of assignment

$$P(H_1|E) = \frac{P(E|H_1)P(H_1)}{P(E|H_1)P(H_1) + P(E|H_2)P(H_2)}$$
$$P(E|H) = \binom{n}{k} p^k (1-p)^{n-k}$$

- ▶ n : total # of occ
- ▶ k : # (e.g.) carbonate occ

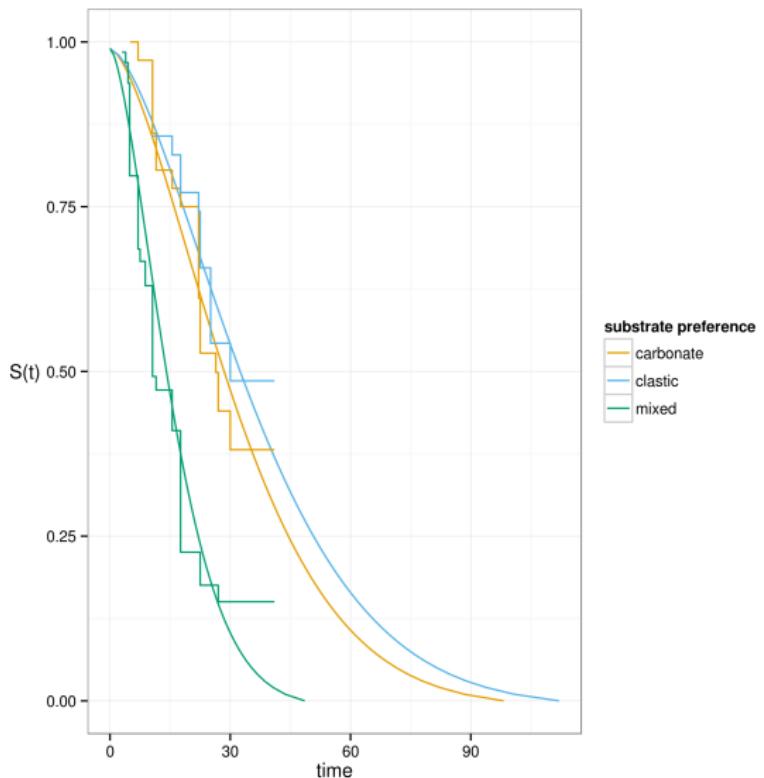

(Simpson and Harnik 2009 *Paleobiology*)

Models

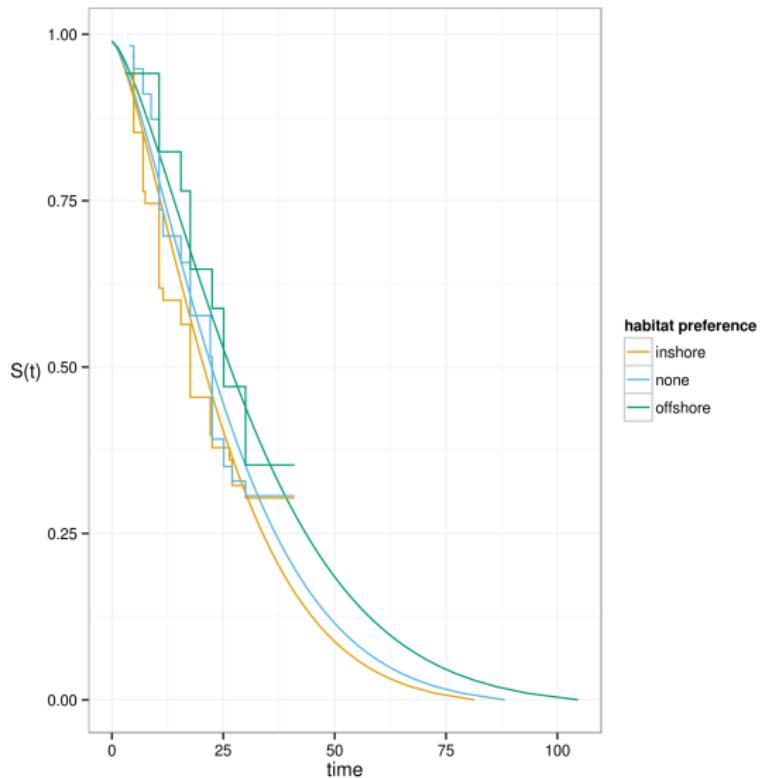

Preliminary results: model comparison

formula	distribution	shape	df	logLik	AICc
~ aff	weibull	1.91	4	-497.5745	1003.4543

Preliminary results: best substrate

Preliminary results: best habitat

Introduction and theory

Brachiopods, environmental preference, and extinction

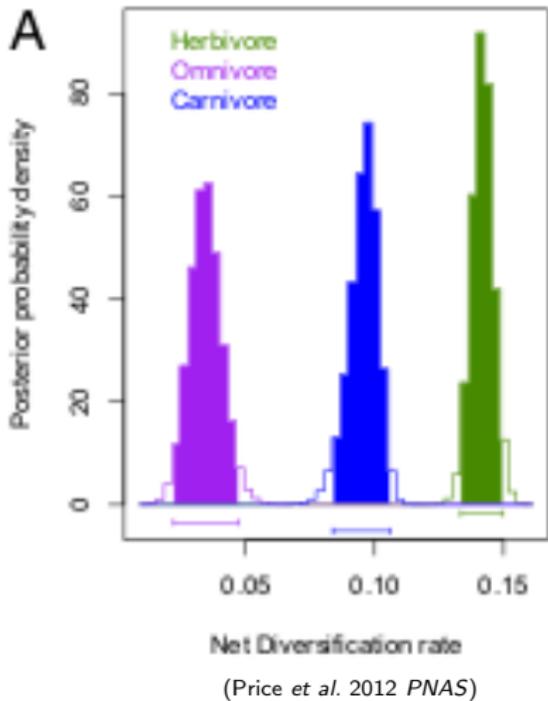

Ecology and survival in Cenozoic mammals

Community connectedness in Cenozoic mammals

Ecological traits

- ▶ dietary category
 - ▶ energetics
 - ▶ availability
- ▶ locomotor category
 - ▶ availability
 - ▶ dispersal
- ▶ body size
 - ▶ energetics
 - ▶ home range size

Predictions: dietary category

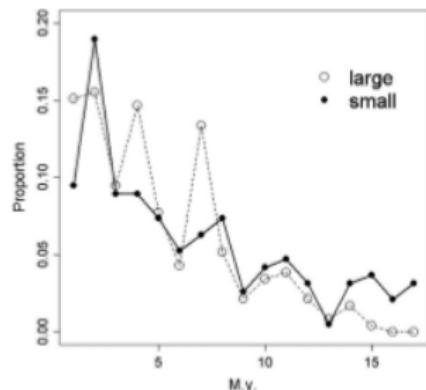

- ▶ trophic hierarchy (stability → duration)
 - ▶ herb: most stable, longest duration
 - ▶ carni: least stable, shortest duration
 - ▶ omni: avg. stability, avg. duration
- ▶ ↑ diversification
 - ▶ ↑ origination; \simeq extinction
 - ▶ \simeq origination; ↓ extinction

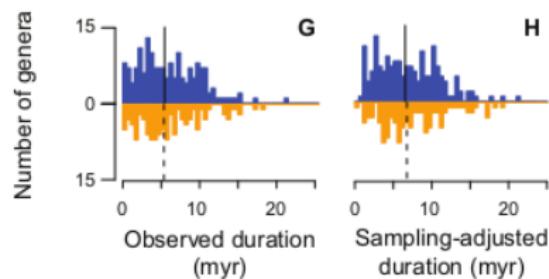

Predictions: locomotor category

- ▶ Paleogene → Neogene
 - ▶ open → closed environment

Predictions: body size

(Liow et al. 2008 PNAS)

(Tomiya 2013 Am. Nat.)

- ▶ ↑ body size, ↑ energy req,
↑ range size, ↓ extinction
- ▶ Europe
 - ▶ lrg body size genera:
↑ extinction
- ▶ North America
 - ▶ generic body size:
 \simeq extinction

Methodology

Biases to survival: a simulation study

- ▶ bias away from $h(t) = \lambda$
 - ▶ species:genus
 - ▶ anagenesis/cryptic speciation
- ▶ time-homogeneous birth-death model
 - ▶ common phylogenetic model
 - ▶ constant p, b
 - ▶ expected $S(t) = \exp^{-\lambda t}$
 - ▶ vary (cryptic) anagenesis

Introduction and theory

Brachiopods, environmental preference, and extinction

Ecology and survival in Cenozoic mammals

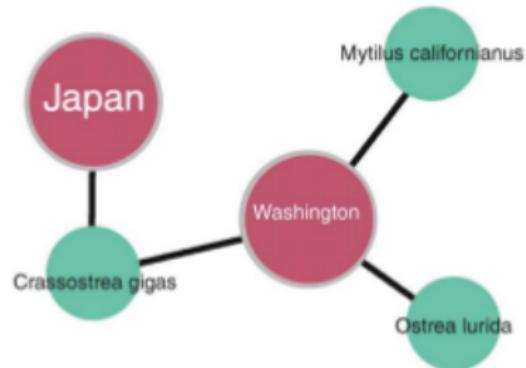

Community connectedness in Cenozoic mammals

Community connectedness

Definition

The degree to which localities are composed of endemic versus cosmopolitan taxa, and how similar this ratio is across localities.

Biogeographic networks

(Vilhena *et al.* 2013 *Sci. Reports*)

- ▶ taxa: species
- ▶ locality: 2x2 equal-area map projection grid
- ▶ 2 My intervals
- ▶ PBDB, NOW, museum collections, compilations

Average relative number of endemics

$$E = \frac{\sum_{i=1}^L \frac{u_i}{n_i}}{L}$$

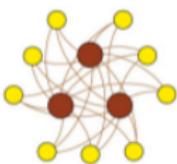

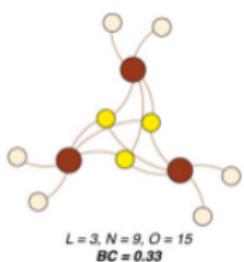

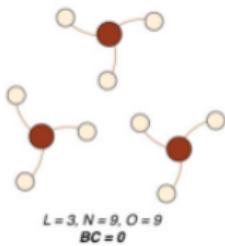

- ▶ L : number of localities
- ▶ u : number of taxa unique to a locality
- ▶ n : number of taxa at a locality
- ▶ $0 \leq E \leq 1$

Average relative occupancy per taxon

$$Occ = \frac{\sum_{i=1}^N \frac{l_i}{L}}{N}$$

- ▶ N : total number of taxa
- ▶ l_i : number of localities a taxon occurs at
- ▶ L : number of localities
- ▶ $0 \leq Occ \leq 1$

Biogeographic connectedness

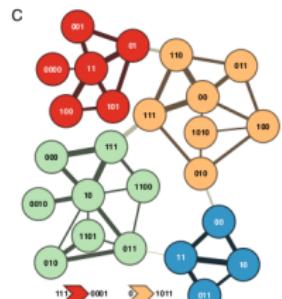

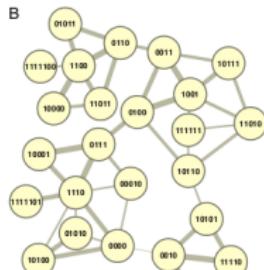

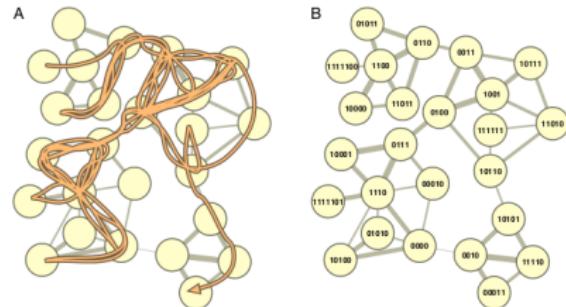

$$BC = \frac{O - N}{LN - N}$$

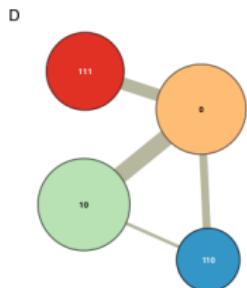

- ▶ O : number of occurrences
- ▶ N : total number of taxa
- ▶ L : number of localities
- ▶ $0 \leq BC \leq 1$

(Sidor et al. 2013 PNAS)

Global versus regional versus local scale processes

- ▶ global
 - ▶ corr w/ global climate
 - ▶ multiple regions corr
- ▶ regional
 - ▶ $\downarrow E, \uparrow Occ,$
 - ▶ $\uparrow BC, \uparrow code$
- ▶ local
 - ▶ $\uparrow E, \downarrow Occ,$
 - ▶ $\downarrow BC, \downarrow code$
- ▶ not mutually exclusive

(Sidor et al. 2013 PNAS)

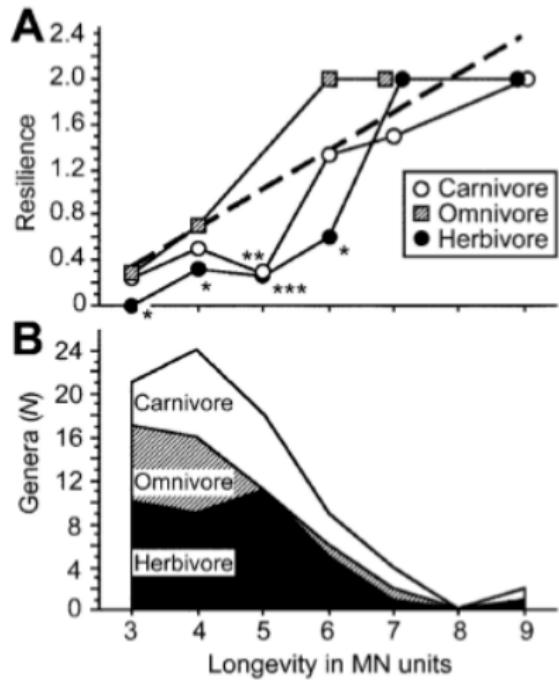

Expectations: locomotor category

(Strömberg et al. 2013 *Nature Com.*)

- ▶ arboreal
 - ▶ ↑ E , ↑ code
 - ▶ ↓ BC, ↓ Occ
- ▶ ground dwelling
 - ▶ ↓ E , ↓ code
 - ▶ ↑ BC, ↑ Occ
- ▶ scansorial
 - ▶ constant ∨ random

Expectations: dietary category

- ▶ herbivore
 - ▶ most like all taxa
- ▶ carnivore
 - ▶ constant √ corr w/ herbivores
- ▶ omnivore
 - ▶ constant √ random

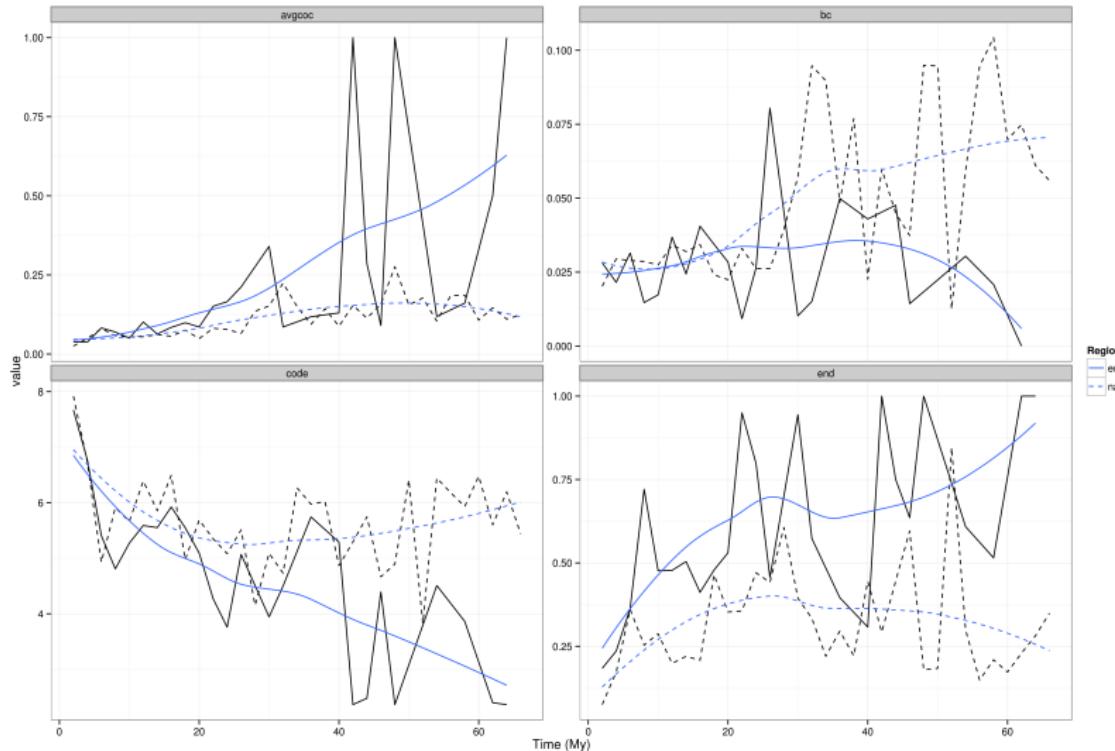

(Jernvall and Fortelius 2004 *Am. Nat.*)

Community connectedness of North America

Community connectedness of Europe

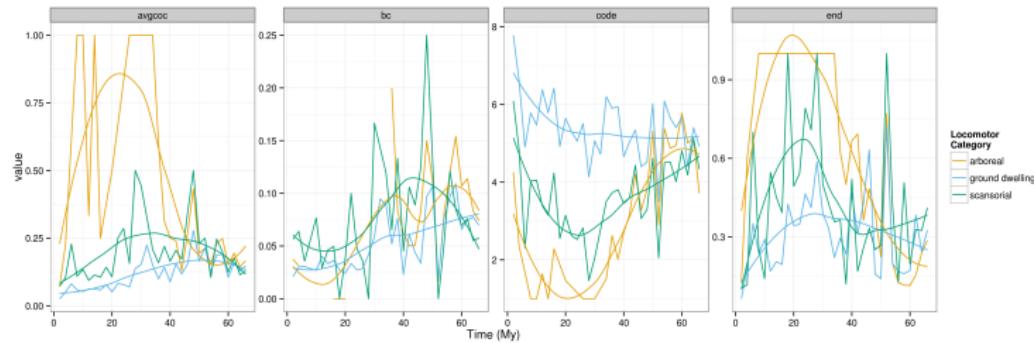

Community connectedness of South America

Preliminary results: NA, Eur

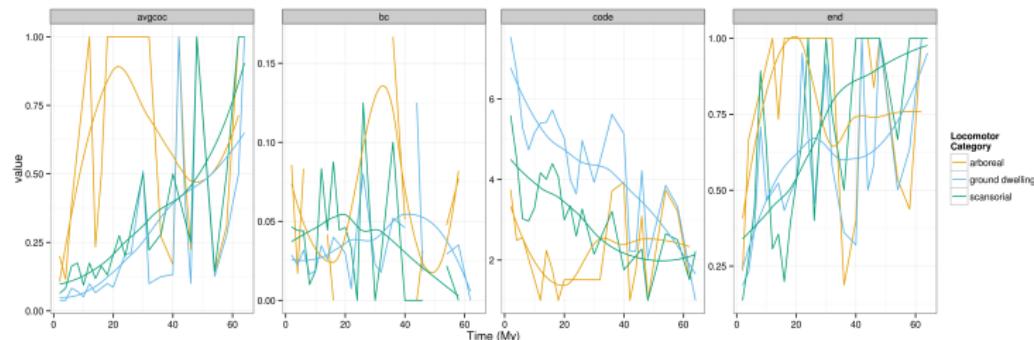

Preliminary results: locomotor category

North America

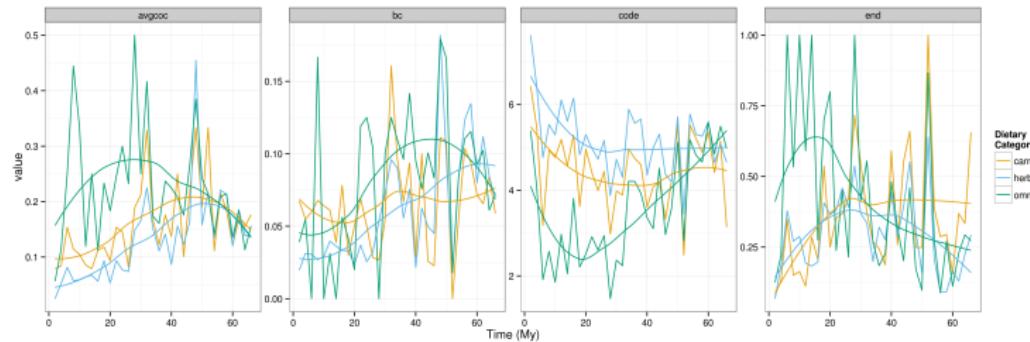

Europe

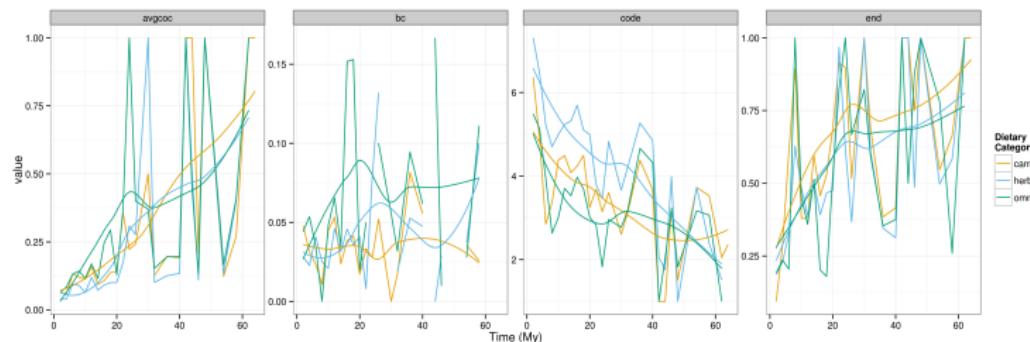

Preliminary results: dietary category

North America

Europe

Questions

Questions

- ▶ Why do certain taxa go extinct while others do not?
- ▶ How is emergence “formed?” When should it be invoked?
- ▶ Is extinction risk taxon–age independent?
- ▶ When should we expect global, regional, or local processes to dominate?

Summary of proposed research

Studies

- ▶ Permian brachiopod trait based survival
- ▶ Cenozoic mammal trait based survival
- ▶ Cenozoic mammal community connectedness
